AcqCenter

Source Selection & Acquisition Management Solutions

Streamline the acquisition process.

The AcqCenter team at MANTECH develops and maintains a full offering of web-based solutions for government and private organizations to assist with all phases of the acquisition lifecycle.

DecisionPoint®

DecisionPoint® is a secure, web-based collaboration tool, developed by MANTECH, which reduces protest risk and increases award schedule efficiency for government agency contract teams and is used in 950+ government agency procurements.

An automated source selection evaluation tool, DecisionPoint® is both an intuitive workflow tool and a robust evaluation database.

DecisionPoint® helps to enforce the evaluation team's source selection process. Evaluator strengths, weaknesses ratings and risks clearly link to RFP evaluation criteria.

Agencies of all sizes rely on the security, functionality, and efficiency of DecisionPoint® to support their source selection strategies and success. With DecisionPoint®, agency officials are able to assess evaluation team progress and quality, while reducing cycle time to meet award schedules.
DecisionPoint® is designed to support federal agency program managers and contracting officers that supervise evaluation teams during the source selection process to:

- Eliminate protests
- Increase evaluation efficiency
- Maximize online collaboration
- Provide comprehensive documentation
- Focus efforts on the quality and substance of the evaluation, not administration, process and logistics.

OnTarget®

Based on DecisionPoint®, OnTarget® is a proposal development and review solution enabling government contractors to focus their proposals on the source selection criteria from the outset and to increase their contract win rate.
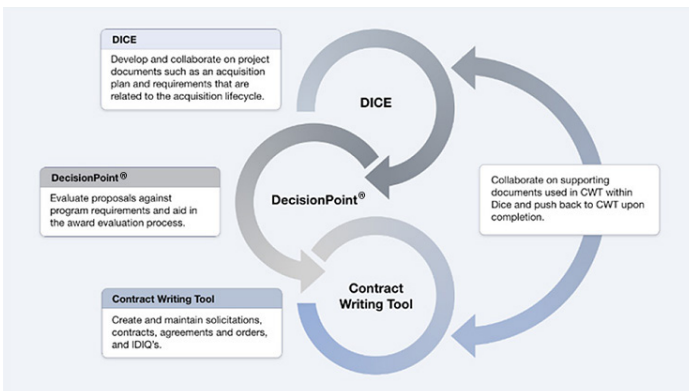

OnTarget®'s intuitive workflow maximizes collaboration and simplifies evaluations, allowing teams to review proposals in the same manner a government evaluator would.

Like DecisionPoint®, OnTarget® offers the ability to build rapid online consensus. The efficient consensus process facilitates collaboration between proposal teams. Consensus findings, progress, and status metrics posted in real-time and are interactively accessible.

PROIX® Suite

The PROIX® (Procurement Information Exchange) Suite is a comprehensive acquisition management lifecycle solution developed by MANTECH, designed to support contract professionals from pre-award to close-out, enabling agencies to simplify, optimize, and accelerate all phases of the procurement process.

The PROIX® Suite is comprised of:

DICE (Document Integrity, Collaboration, and Evaluation), a secure web-based real-time document collaboration and workflow tool for the development and evaluation of Rich Text, Slide Deck, and Form documents to meet the needs of a dispersed workforce. Documents created in DICE can be exported to DecisionPoint™ and/or to the Contract Writing Tool.

Integration with **DecisionPoint**®, MANTECH's secure web-based source selection and collaboration tool. Templates can be created in and exported from DICE to be used in DecisionPoint®.

Contract Writing Tool, a secure web-based application for assisting Contracting Officers (COs) and their representatives with creating and managing acquisition documentation from solicitation, award, and period of performance to close-out. Supporting applications include the Content Manager, Reference Library, and Vendor Manager. The Contract Writing Tool includes:

- Contract Writing Tool (CWT) application used to create and manage contracting documents throughout the acquisition lifecycle.

- Content Manager web application to create and manage the content, rules and fill-in values for clauses and prescriptions from multiple regulations as well as page 2 statements for the automated creation of the Block 14 Continuation content of a contract modification or solicitation amendment.

- Reference Library web application used by CWT application users to lookup clauses and their prescriptions.

- Vendor Manager web application to manage information about vendors and a web service that can be used by a customer's existing vendor management system as alternative means to providing the CWT application with the vendor information.
