

# FinOps+

## A MANTECH Mission Economics™ Offering

A suite of solutions that expands proven cost optimization and governance strategies across the technology landscape. With its modular design, MANTECH's FinOps+ is tailored to each client's technology ecosystem, requirements and cost optimization goals.

### Challenges

**"Best Value" Procurement Gaps:** Recent federal acquisition mandates for "best value" require granular, outcome-based metrics that are difficult to produce when justifying technology ROI against mission success.

**Redundant and Wasteful Spend:** Legislative pressure to eliminate wasteful spend requires high-fidelity visibility and reporting consistency often missing in complex, multi-vendor technology footprints.

**Volatility of Consumption-Based Pricing:** The shift from predictable CapEx annual budgets to dynamic, consumption-based OpEx creates opportunity for significant "bill shock" as cloud, SaaS and AI technologies scale.

### The FinOps+ Suite of Solutions

MANTECH customizes FinOps capabilities to address specific client use cases through a combination of our Comprehensive Technology Cost Optimization and Deliverable-Specific Modular solutions.

**FinOps for Cloud:** Standardizes multi-cloud cost management to optimize resource consumption, usage rates and financial accountability.

**FinOps for SaaS:** A targeted, platform-specific solution that optimizes unit-based spending by driving down consumption-based costs through granular telemetry tuning of compute, storage and ingestion triggers.

**FinOps for Hybrid Cloud:** Provides unified financial visibility and governance across public cloud, private cloud and federal on-premises data centers.

**FinOps for AI:** Tailors optimization strategies for compute-intensive AI infrastructure, token-based pricing and rapidly evolving service models.

### Specialized Deliverable Modules

**Cost Optimization Assessment:** Identifies high-impact savings through a deep-dive infrastructure audit mapped to a prioritized roadmap for sustained economic efficiency.

**Maturity Assessment:** Benchmarks organizational readiness against FinOps Foundation standards using the "Five Lens" approach to accelerate capability growth.

**Pilot Program:** Validates value-based engineering through a time-bound demonstration that benchmarks inefficiencies and establishes scalable governance

**Platform Analysis of Alternatives (AoA):** Employs a data-driven methodology to identify the most effective cost-optimization tools for unique agency environments.

**FinOps as Code:** Integrates financial guardrails into CI/CD pipelines to intercept high-cost architectural patterns before resource provisioning

**Cloud Shutdown Playbook:** Automates infrastructure suspension procedures to protect public funds and maintain fiscal control during critical events.

### Outcomes

**Mission-Centric Value Transparency:** MANTECH Mission Economics™ transforms opaque cost reporting into high-fidelity "Units-of-Value" metrics that correlate every dollar of technology spend directly to measurable mission outcomes.

**Quantifiable Cost Avoidance:** Achieve immediate and sustained budget reclamation through the elimination of architectural waste across multi-cloud and hybrid environments, SaaS hosting and subscription rightsizing, and GPU optimization.

**Automated Economic Guardrails:** Transition from reactive "fire drills" to proactive "Shift-Left" governance by embedding financial accountability directly into CI/CD pipelines to block high-cost patterns before resources are provisioned.

### Why MANTECH?

**MANTECH Mission Economics™:** A methodology that quantifies technology investment value generation through mission impact by shifting the cost focus from "what we spend" to "what we achieve."

**"Shift-Left" Governance:** We integrate financial accountability into the development lifecycle, ensuring systems are optimized by design, not as an afterthought.

**FinOps Foundation Premier Member:** As a Certified Provider and Board Member, MANTECH defines the future of FinOps standards specifically for the federal sector.

In business for more than 57 years, MANTECH excels in cognitive cyber, AI, data analytics, and enterprise IT. We enable federal agencies to achieve mission objectives more cost-efficiently through active leadership in the global FinOps community.
